Vrln, većno omiljena knjiga za rješavanje nekih teških matematičkih problema, može biti od velike koristi za razumijevanje i to u veoma širokoj skali. Ujedno, to je knjiga za sve onog koji se upitava o osećanju matematičkih problema i njihove rješenja.

Analitički računanje matematičkih problema značajno se razlikuje od rješavanja problemi u drugim disciplinama. Osnovno, matematički problemi se razlikuju po svojoj strukturi i kvaliteti rješenja. Osim toga, matematički problemi se većinom rješavaju pomoću računara, a ne ruke.

New methods for solving nonlinear integral equations: Heuristic Solves, 2009-12-21 by guest

The use of trial functions is key. It is not easy to find good trial functions that are close to the exact solutions. In this work, we study a new approach to solving nonlinear integral equations using a combination of trial functions and the Adomian decomposition method. The method is based on the use of trial functions and the Adomian decomposition method, which are powerful tools for solving nonlinear integral equations. The method is simple and easy to implement, and it can be used to solve a wide range of nonlinear integral equations. The method is especially useful for solving nonlinear integral equations that are difficult to solve using other methods.
